Derandomizing with PRG

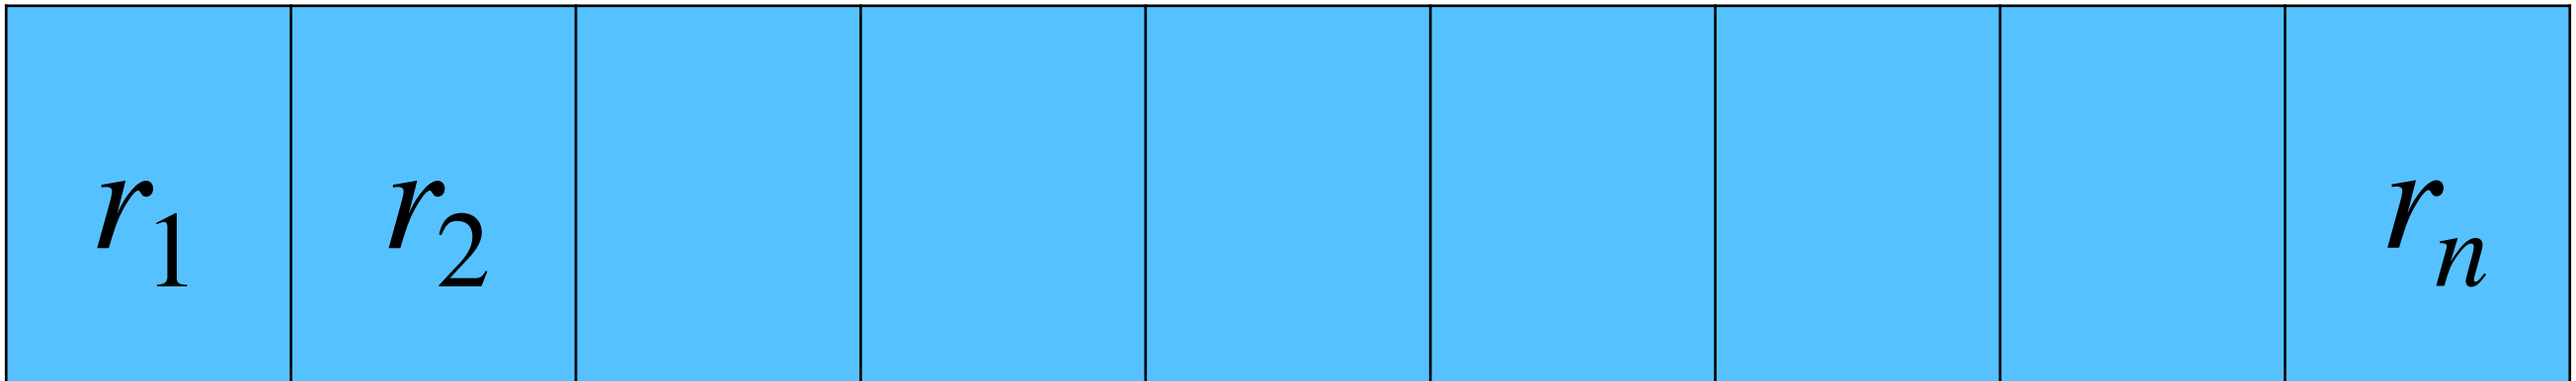
- Indyk '00 showed a black-box way to decrease memory for such a construction

- Consider the following **one-pass** algorithm parameterized by x which takes as input a random string with n blocks

- Initialize $\mathrm{sk} \leftarrow 0$

- Use r_i to generate S_{*i}

- Update sk $\leftarrow$ sk $+ x_i \cdot S_{*i}$



r_1
r_2
r_n
