

**Introduction**

• Datasets these days are very large and presented to us in different ways

- Many existing algorithms assume arbitrary access to input data and run in super-linear time

- Can these algorithms reasonably handle large inputs which maybe presented in unconventional ways?

# Introduction

- Datasets these days are very large and presented to us in different ways
- Many existing algorithms assume arbitrary access to input data and run in super-linear time
- Can these algorithms reasonably handle large inputs which maybe presented in unconventional ways?

# Classic Setting: An Example Problem
