

MatrixSketching

- Never have to compute the matrices  $Q^{\otimes p}$ ,  $K^{\otimes p}$  and just use  $Q'$  and  $K'$

- Can simply compute  $L^T(Q' \cdot (K')^T) \cdot V$  in linear time

Does this work?

• Err, not really.

Non-negativity

- $Q' \cdot (K')^T$  can have negative entries

# Matrix Sketching

- Never have to compute the matrices  $Q^{\otimes p}, K^{\otimes p}$  and just use  $Q'$  and  $K'$
- Can simply compute  $\text{LT}(Q' \cdot (K')^T) \cdot V$  in linear time
- Does this work?
  - Err, not really.
- Non-negativity
  - $Q' \cdot (K')^T$  can have negative entries

# Solving Issue of Negative Entries
