

HashtPRG

• Why stop at two children?

• We show any branching factor

• Getting to any block of the string is quicker

• Need to spend more space to store hash functions though

• Time vs space trade off

HashPRG

- Why stop at two children per node?
- We show any branching factor works
- Getting to any block of the string is quicker
 - Need to spend more space to store hash functions though
 - Time vs space tradeoff
