

QueryComplexity

• Access to data as maybe restricted for efficiency:

• Query arbitrary entries

• Query matrix-vector products

• Query arbitrary *linear* measurements

A

(i, j)

$A_{i,j}$

v

Av

u

$u^T A \leftarrow$

$$= \sum_{i,j} S_{i,j} A_{i,j} = \langle \text{vec}(S), \text{vec}(A) \rangle$$

Measure

A

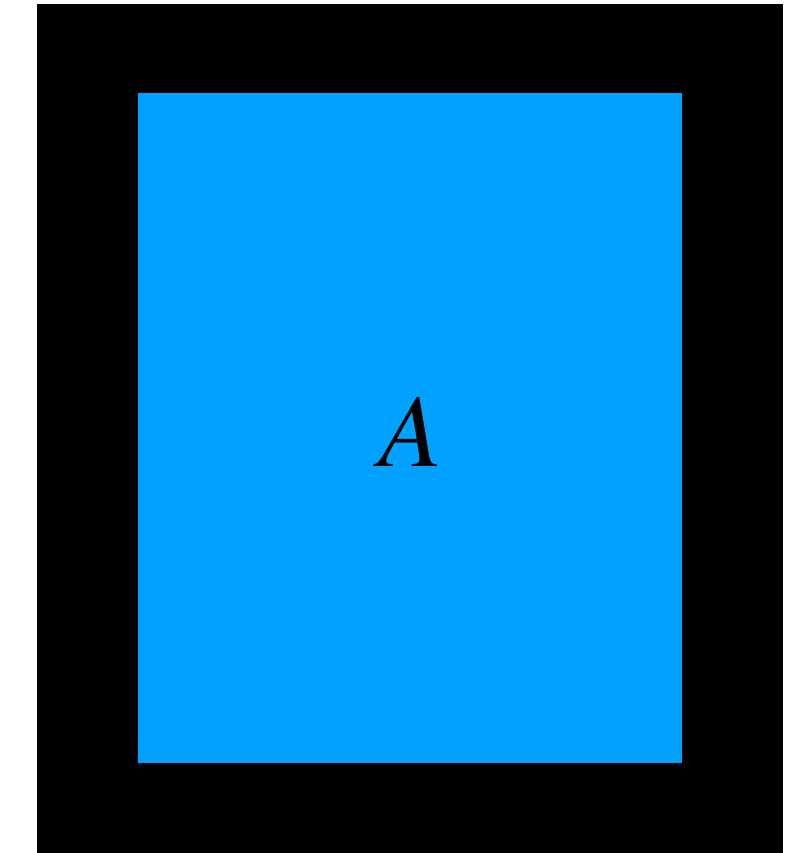

with

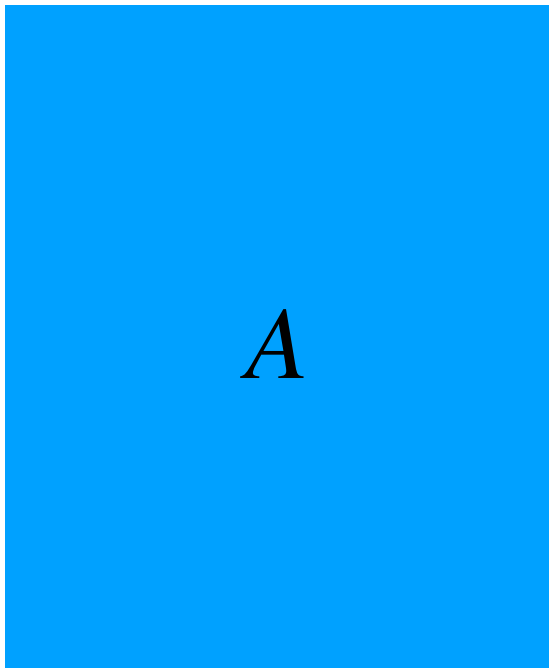

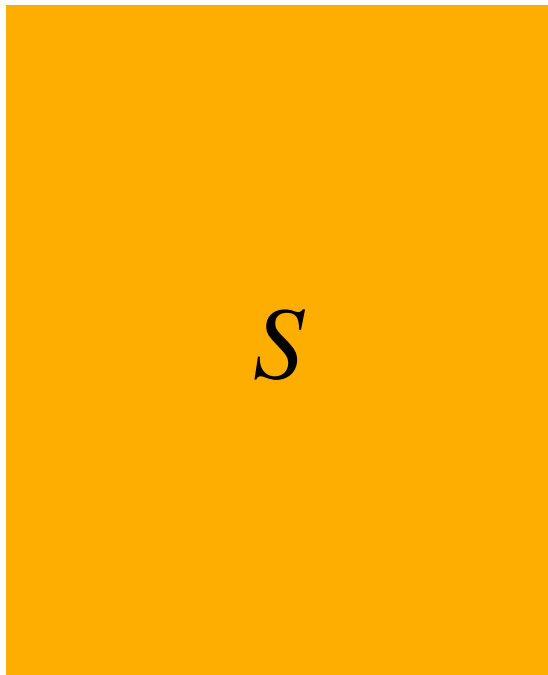

S

• How many queries do we need to solve a problem?

Query Complexity

- Access to dataset maybe restricted for efficiency:
 - Query arbitrary entries
 - Query matrix-vector products
 - Query arbitrary *linear measurements*

Measure  with  $= \sum_{i,j} S_{i,j} A_{i,j} = \langle \text{vec}(S), \text{vec}(A) \rangle$

- How many queries do we need to solve a problem?

Fast and Space Optimal Streaming Algorithms
