

MatrixSketching

- Never have to compute the matrix $Q^{\otimes p}$, $K^{\otimes p}$ and just use Q' and K'

- Can simply compute $L^T(Q' \cdot (K')^T) \cdot V$ in linear time

Does this work?

• Err, not really.

Non-negativity

Matrix Sketching

- Never have to compute the matrix $Q^{\otimes p}, K^{\otimes p}$ and just use Q' and K'
- Can simply compute $\text{LT}(Q' \cdot (K')^T) \cdot V$ in linear time
- Does this work?
 - Err, not really.
- Non-negativity

Solving Issue of Negative Entries
