Independent Sampling of Columns

• We want to construct a sketching matrix S such that for all x

• Sx can be used to compute what we want to know about x

ullet S can be stored efficiently

• S_{st_i} can be generated **on-demand**

ullet If each S_{st_i} is independently sampled from a distribution

Analysis is easier

• $\Omega(n)$ space to store S

Independent Sampling of Columns

- We want to construct a sketching matrix S such that for all x
 - Sx can be used to compute what we want to know about x
 - S can be stored efficiently
 - S_{*i} can be generated **on-demand**
- If each S_{st_i} is independently sampled from a distribution
 - Analysis is easier
 - $\Omega(n)$ space to store S

Derandomizing with PRG
