## **Our Results**

Theorem: For  $0 , can approximate <math>F_p(x)$  up to  $1 \pm \varepsilon$  using  $\varepsilon^{-2} \log n$ bits of space and  $O(\log n)$  update time

• Valid only for  $\varepsilon < 1/n^c$ 

• Improves on  $O(\log^2 n \log \log n)$  update time of [KNPW '11]

## Our Results

- **Theorem**: For  $0 , can approximate <math>F_p(x)$  up to  $1 \pm \varepsilon$  using  $\varepsilon^{-2} \log n$  bits of space and  $O(\log n)$  update time
  - Valid only for  $\varepsilon < 1/n^c$
  - Improves on  $O(\log^2 n \log \log n)$  update time of [KNPW '11]

## **Our Results**

• A streaming algorithm which can compute  $\hat{x}[i]$  such that for  $\alpha \leq 1$ 

- Obtained by derandomizing [Minton and Price '14]
- The algorithm uses  $O(tr \log(n) + \log^2 n)$  bits of space
  - $O(r \log n)$  update time
