Our Results

 Main question: Can we obtain space optimal streaming algorithms with fast update times?

Yes! For many problems.

• Theorem: For p>2, there is an algorithm using $\tilde{O}(n^{1-2/p})$ space and an update time of O(1)

• Improves on $poly(\log n)$ update time of earlier works such as [Andoni, Krauthgamer, Onak '10]

 $F_p(x) = \sum |x[i]|^p$

Our Results

- Main question: Can we obtain space optimal streaming algorithms with fast update times?
 - Yes! For many problems.

$$F_p(x) = \sum_{i} |x[i]|^p$$

- **Theorem**: For p>2, there is an algorithm using $\tilde{O}(n^{1-2/p})$ space and an update time of O(1)
 - Improves on $poly(\log n)$ update time of earlier works such as [Andoni, Krauthgamer, Onak '10]
