Derandomizing using Nisan's PRG

• Need to fool $O(\log n)$ space algorithm and require poly(n) length bitstring

• Require $l, t = \Omega(\log n)$

• Seed of size $O(\log^2 n)$

• Need to evaluate $O(\log n)$ hash functions to retrieve a block

• We use $\Omega(n^{1-2/p})$ bits to store the sketch

Can we use a larger seed for the PRG to decrease $O(\log n)$ hash evaluations?

Derandomizing using Nisan's PRG

- Need to fool $O(\log n)$ space algorithm and require poly(n) length bitstring
 - Require $l, t = \Omega(\log n)$
 - Seed of size $O(\log^2 n)$
 - Need to evaluate $O(\log n)$ hash functions to retrieve a block
- We use $\Omega(n^{1-2/p})$ bits to store the sketch
 - Can we use a larger seed for the PRG to decrease $O(\log n)$ hash evaluations?

HashPRG: Our Construction
