Query Complexity

Access to dataset maybe restricted for efficiency:

Query arbitrary entries

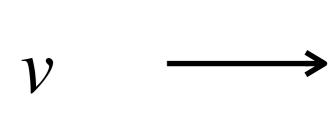

Query matrix-vector products

Query arbitrary linear measurements

 \boldsymbol{A}

(i,j)

 $A_{i,j}$

 $Av \leftarrow$

 $u^{T}A \leftarrow$

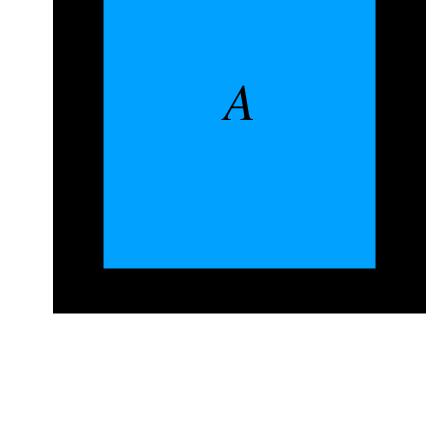

$$= \sum_{i,j} S_{i,j} A_{i,j} = \langle \text{vec}(S), \text{vec}(A) \rangle$$

How many queries do we need to solve a problem?

Query Complexity

- Access to dataset maybe restricted for efficiency:
 - Query arbitrary entries
 - Query matrix-vector products
 - Query arbitrary linear measurements

Measure
$$\begin{array}{c|c} A & \text{with} & \\ S & = \sum_{i,j} S_{i,j} A_{i,j} = \langle \operatorname{vec}(S), \operatorname{vec}(A) \rangle \\ \end{array}$$

• How many queries do we need to solve a problem?
