Small Space Algorithm

ullet If S has m rows, algorithm uses m "words" of space

Makes a single pass over the random string from left to right

• Computes Sx at the end

Using PRG that fools single-pass algorithms:

ullet Sx computed using PRG also has the same properties

Need to store only the "seed" to the PRG

Small Space Algorithm

- If S has m rows, algorithm uses m "words" of space
- Makes a single pass over the random string from left to right
- Computes Sx at the end
- Using PRG that fools single-pass algorithms:
 - Sx computed using PRG also has the same properties
 - Need to store only the "seed" to the PRG

Nisan's PRG
