Introduction

- Datasets these days are very large and presented to us in different ways

- Many existing algorithms assume arbitrary access to input data and run in super-linear time

- Can these algorithms reasonably handle large inputs which maybe presented in unconventional ways?

Introduction

- Datasets these days are very large and presented to us in different ways

- Many existing algorithms assume arbitrary access to input data and run in super-linear time

- Can these algorithms reasonably handle large inputs which maybe presented in unconventional ways?

An Example Problem
Principal Component Analysis
